Column/Bar Charts:

To compare how healthcare charges vary by weight/diabetes status and across different hospital tiers by state.

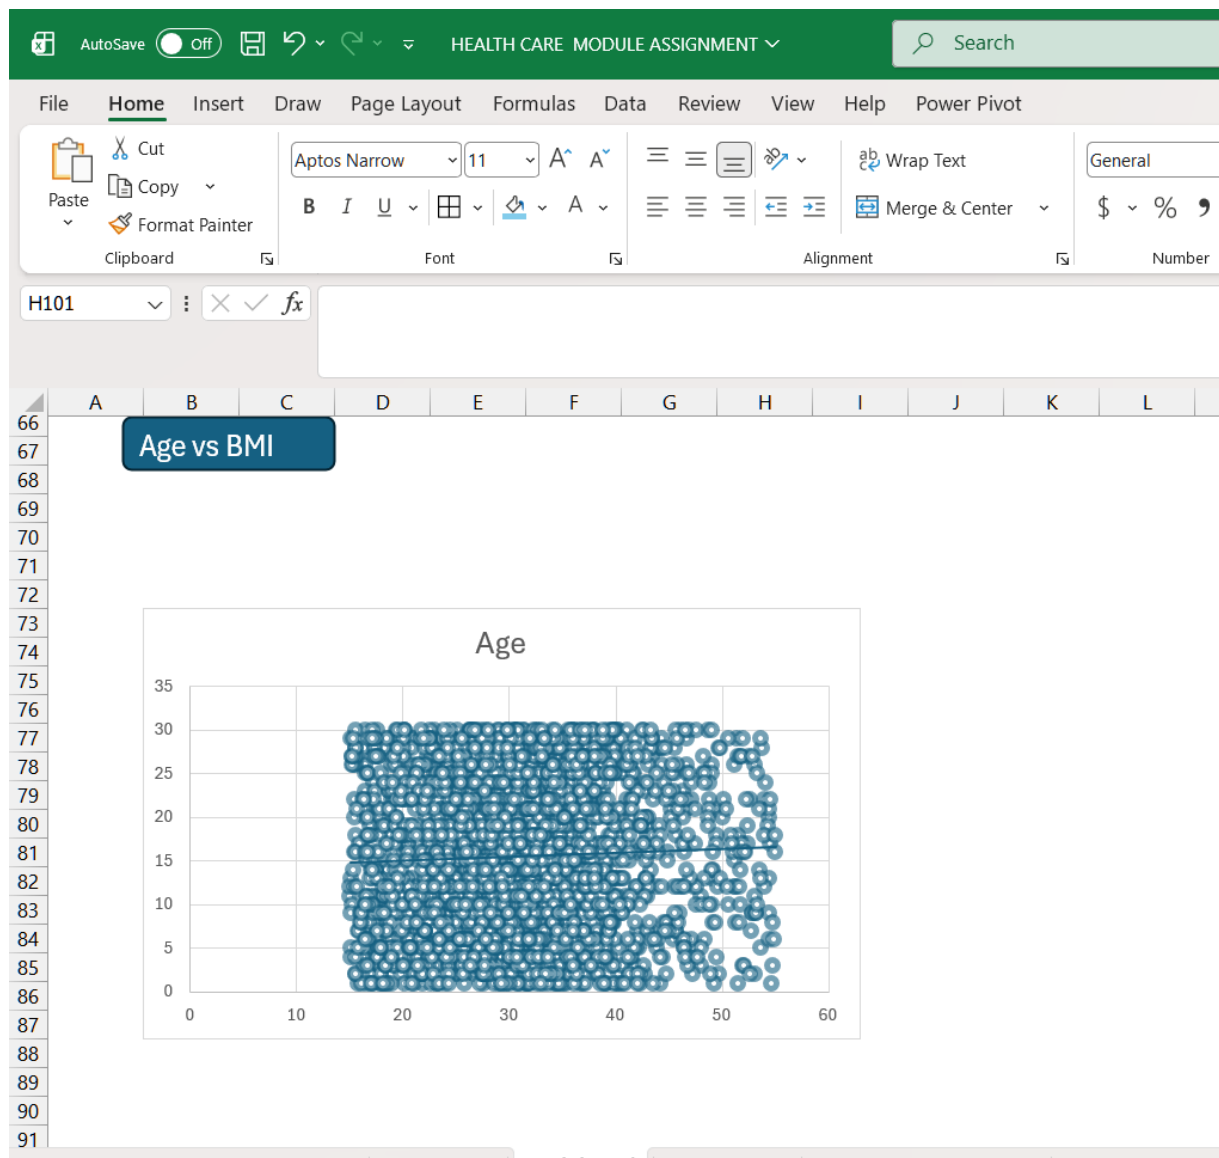

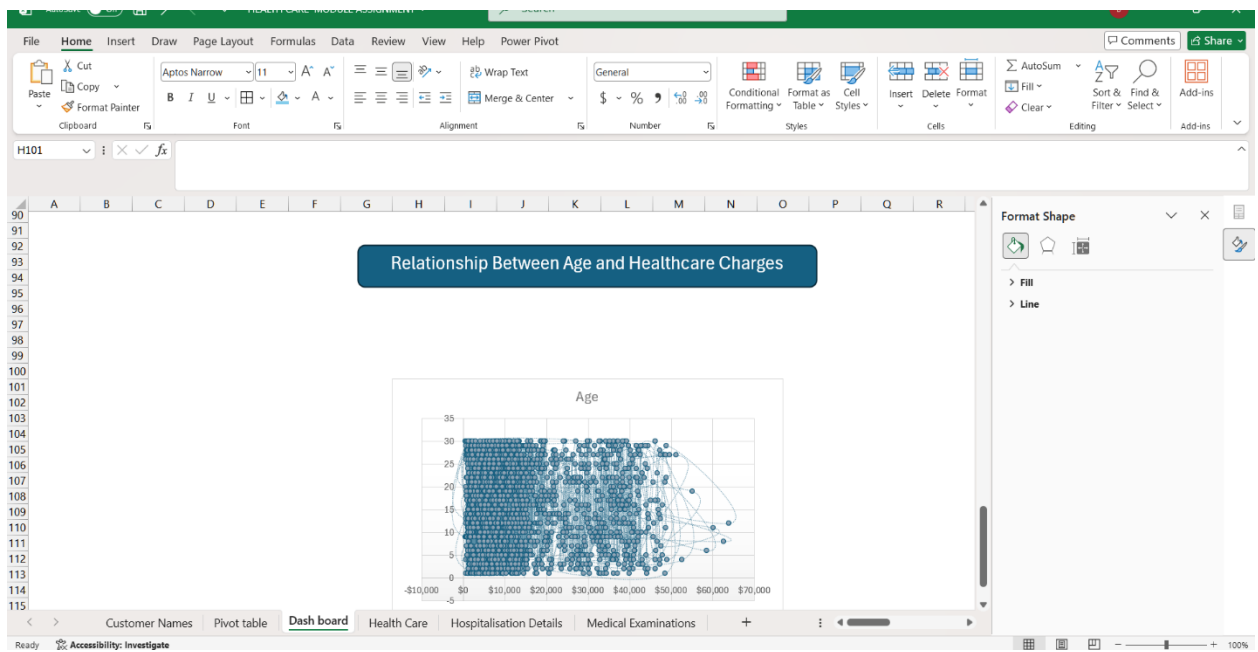

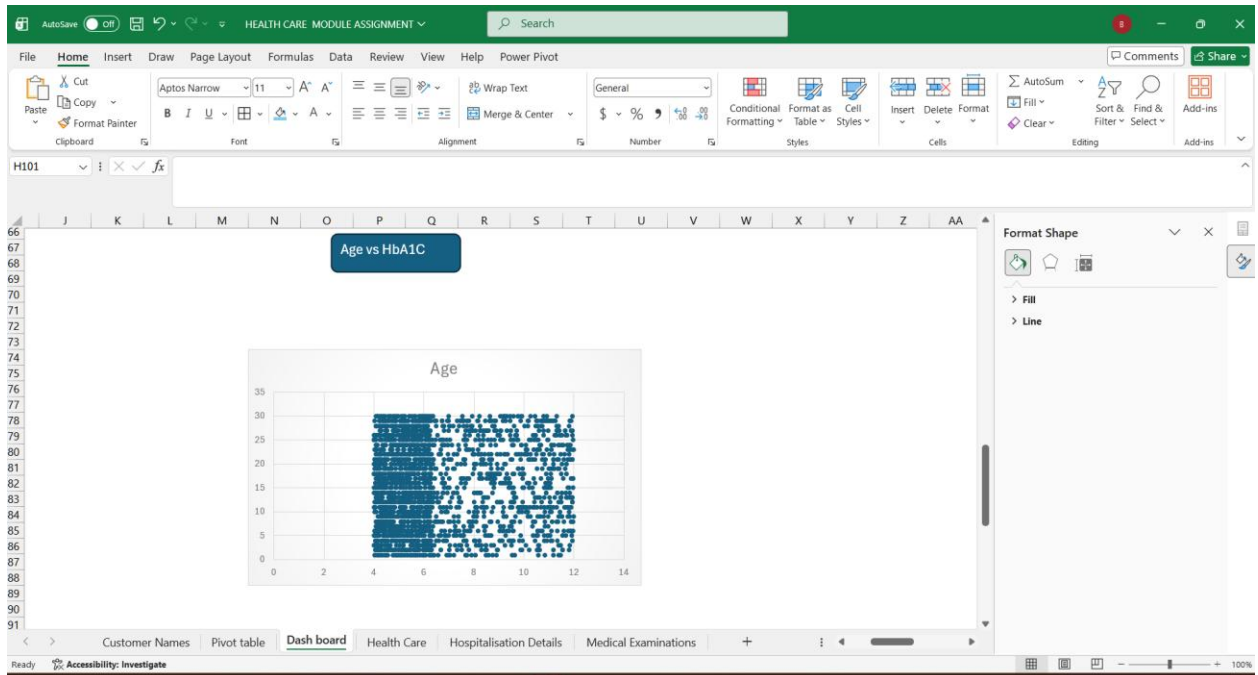

Line/Scatter Plots:

To explore correlations between age and clinical metrics (BMI, HbA1C) as well as overall healthcare costs.

Dashboard Creation:

The final deliverable is an interactive, consolidated Excel Dashboard containing all the charts listed above. It must include functional interactive Slicers for both Weight Status and Diabetes Status so a user can filter the entire dataset dynamically with a single click.
